Poultry Vision
Far Beyond EC1099

Unique Selling Points **In-Line Chicken Feet and Paw Processing**

- ✓ Automatic removal of ammonia burns
- ✓ Requires less labour
- ✓ Quality improvement
 - A Grade up to 80%
 - B Grade 20-30%
- ✓ Fits all processing plants,
regardless of line speed
- ✓ Simple in operation, cleaning and maintenance
- ✓ Profitable and interesting R.O.I.
- ✓ Guaranteed sales of quality products

Paw Cutting Machine

Paw Shackle Unloader

Paw Picking Machine

Automatic removal of ammonia burns

The quality of Chicken Paws is largely determined by visible ammonia burns. The removal of these burns is labour intensive and therefore less interesting for processing plants to do this job themselves. The DVS Paw processing system has been specially developed (and patented?) for the removal of ammonia burns and is largely automated.

Quality increase

The quality of the processed Paw is improved. A maximum output of A Grade Paws of up to 80% may be achieved, depending on the quality of the incoming bird. The remaining Paws are B Grade. No more Feet and Paws into the rendering, but suitable for export. Because of the better quality output of Paws, the return on investment in a DVS processing line is in between 6 to 9 months, based on the capacity of the processing plant.

Guaranteed sales

The possibility of guaranteed export sales of the end product for a fixed period of time can be concluded in a contract. This may be an extra reason for investing in the DVS Paw processing system.

DVS - Paw processing system

Can fits anywhere

The DVS Paw processing system fits all existing broiler processing lines of any hourly capacity. The system equipment: Feet Scalding Tank, Feet Brush Scraper, Paw, Cutting Machine, Paw Shackle Unloader, Modular Belt Conveyor Paw Picking Machine, Paw Water Chiller, Paw Grading Conveyor and the additional Track & Trace module

Track & Trace System

The track and trace system rejects feet, which have been disapproved by the veterinary inspector in the evisceration department, automatically. Chinese veterinary authorities may give processing plants, using the integrated track and trace system, an additional quality label, which enables them to sell their A Grade Paws at 25-30% higher prices.

Tailor made

To make the offer which can not be refused a plant visit is essential. Upon request a meeting is organized, which will result in a tailor made offer. Next to this offer the offer for the guaranteed purchase of A and B Grade Paws (and/or Feet) is presented.

Profitable

With the DVS In-Line paw processing system, you will upgrade offal to a product for human consumption. Are you interested in a profitable tailor made proposal? Send us your processing plant drawing (covering killing/de-feathering and evisceration departments) with data on hourly capacity, used shackles, etc.

You also receive an offer for the purchase of A and B Grade Paws (and/or Feet).

For a quick financial indication you can visit our our website.

A- and B-grade chicken paws proofs to be very profitable

Human consumption of chicken paws increases in Asia and Latin America
